LABORATORY SECTION

Report of Bacteriological Examination of Water Sample

Samples collected by - Steve Short
Date of collection - 7-30-91
Place - storm sewer, 1200 N. Summit, Springfield MO
Owner of water supply -
Date analyzed - 7-31-91

Lab No.	Source of Sample	Fecal coliform per 100 ml. (MF)	Coliform per 100 ml. (MF)	Nitrate Nitrogen ppm	*HPC
1521	street curb storm sewer	20,000			

Fecal strep/100ml. = 500,000 Ratio = .04 to 1

The above examinations were made by the City of Springfield, Department of Public Health Laboratory in accordance with the latest edition of Standard Methods of Water Analysis of the American Public Health Association. At the time this examination was made, the sample was _____

The safety of a water supply depends upon proper construction and protection against contamination. A favorable bacteriological analysis alone should not be accepted as conclusive evidence of the safety of a water supply unless a survey of the supply indicates no sanitary defects. It is recommended that a water supply used for drinking purposes be analyzed routinely.

Analyst Larry L. Dean

For additional information: Phone _____ Time _____

*HPC = heterotrophic plate count, Formerly (SPC) standard plate count
